

AI WeatherWise API

Project title: “ AI WeatherWise Api ”

Team Leader: G.Kaviya

Team Members:

- M.Keerthana
- S.Janani
- J.Janapriya
- D.Jenifer

8: Project Demonstration Phase

Introduction:

The Project Demonstration Phase presents the completed AI WeatherWise API and demonstrates its main functionalities. The developed APIs are executed and tested using Postman to show how the system works.

Project Demonstration:

The demonstration covers the complete flow of the AI WeatherWise API, starting from user registration and login. After authentication, the system fetches weather data, generates a weather summary, and provides weather recommendations based on the weather conditions.

Modules Demonstrated:

- **User Registration** – Demonstrates creation of a new user account.
- **User Login** – Demonstrates user authentication and secure access.
- **Fetch Weather Data** – Demonstrates retrieving current weather information.
- **Generate Weather Summary** – Demonstrates AI-generated weather summary.
- **Generate Weather Recommendation** – Demonstrates weather-based recommendations.

Demonstration Tools:

The project APIs are demonstrated using **Postman**, while the backend runs using **Node.js** and **Express.js**. MongoDB is used for database management and Gemini AI is used for generating weather insights.

Demonstration Outcome:

The demonstration shows that the main features of the **AI WeatherWise API** are working as expected. The API requests and responses are verified through Postman, and the complete project workflow is presented successfully.
